R2 | Review Actions

Historical snapshot | 1 December 2009 to 9 December 2011 | GBP

Proposed record-review queue | aggregate evidence only | individual customer records remain local

1 | Credit-driven assignment checks

4 Customers differing gross/net in all three scenarios

Audit underlying eligible credits and invoice context before any outreach.

Recorded credits may be cancellations; no original-order match is established.

2 | Volume-sensitive migration

0 Off-diagonal cells meeting selected minimum

Keep individual exceptions separate from campaign targeting.

No stable, volume-supported segment campaign target is established.

3 | Cohort composition review

5,256 Complete individual 90-day denominator

Compare first-observed cohorts and source-start exclusion diagnostic.

Unequal observation exposure and left censoring prevent acquisition/causal claims.

Evidence: PQ_Stability, PQ_Migration, PQ_Support, PQ_Repeat and PQ_Policy. Scope follows AssignedCountry; migration also follows ScoringScenario and MinimumCustomers. Priority is a proposed investigation order, instead of an approved intervention or achieved retention benefit.
