R2 | Segment Migration

Historical snapshot | 1 December 2009 to 9 December 2011 | GBP

Value Overview | Segment Migration | Cohorts | Review Actions | Parameters | Checks

Assigned country	ALL	**Scoring scenario**	rfm_1	**Multiplier**	1.0×

Purchase-history customers	**Changed gross/net segment**	**Changed / purchase-history**
5,852	25	0.43%
Changed monetary score	**Always moved across scenarios**	**Negative net customers**
104	4	3

Fixed cutoff: 10 December 2011. Rows are gross segments; columns are net segments. Counts remain visible below the investigation minimum; shared boundaries prevent credits from improving monetary scores.

	Higher RFM	Middle RFM	Lower RFM
Higher RFM	1,308	13	1
Middle RFM	0	1,476	11
Lower RFM	0	0	3,043

Supported off-diagonal review cells 0

Joint 0.8× / 1.0× / 1.2× stress tests change all R/F/M upper boundaries, instead of a uniformly stricter or looser policy. Group minima 15 / 30 / 60 are set in Parameters.

Assigned country uses the largest positive gross value per identified customer. This filter is independent of transaction country and the financial month controls. Credit-only customers stay outside purchase-history RFM. Broad unchanged labels can still hide material credit exposure.
